Soham Poddar

PMRF Research Scholar
Indian Institute of Technology, Kharagpur

PERSONAL DETAILS

Contact	sohampoddar26@gmail.com *OR* +91 9163642188
Website	https://sohampoddar26.github.io/
Google Scholar	https://scholar.google.com/citations?user=PIIZaaOAAAAJ&hl=en/
Research Interests	Deep Learning, Natural Language Processing, Agentic AI, Domain-specific applications.

EDUCATION

PhD in Computer Science and Engineering (Thesis submitted) 2020-2025
Indian Institute of Technology, Kharagpur.
Under the guidance of **Dr. Saptarshi Ghosh**. (Coursework CGPA: **9.3**)
Thesis title: *Effects of COVID-19 pandemic on Vaccine-Opinions through Social Media Analyses*

MTech Degree in Computer Science and Engineering 2018-2020
Indian Institute of Technology, Kharagpur
Graduated with CGPA: **9.6** (Department Rank: **2**)
Thesis Title: *Summarizing Legal Case Documents: Incorporating Domain Knowledge in Summarization Algorithms*

BTech Degree in Computer Science and Technology 2014-2018
Indian Institute of Engineering Science and Technology, Shibpur
Graduated with CGPA: **9.1**

EXPERIENCE

Research Intern Jun-Nov 2025
Hewlett Packard Enterprise Labs
Developing and benchmarking LLM Agentic frameworks for long-term memory and data management, using LangGraph

SKILLS

Human Languages	English (fluent), Bengali (native), Hindi
Computer Languages	Python, C, C++, Java, HTML, CSS
Tools/Technologies	LangGraph, Transformers, PyTorch, Github Copilot, Git, Linux, LaTeX
Hobbies	Bass Guitar, Motorcycling, Swimming, Gaming, watch Formula **1** & STEM documentaries

AWARDS

- Received **ACM IARCS Travel Grant** to attend NAACL 2025 in Albuquerque, USA.
- Received **ACM IARCS Travel Grant** and **Volunteer Travel Grant** to attend ICWSM 2024 in Buffalo, USA.
- Received **Student Travel Grant** to attend SIGIR 2022 in Madrid, Spain.

- **Best Student Paper** Award at ICAIL 2021
- Awarded **PMRF fellowship** by Ministry of Education, Govt. of India. December 2020 cycle.

- Qualified for the onsite **regionals of ACM ICPC** in **Dec 2016** (IIT Kharagpur region) and **Dec 2017** (Kolkata region).
- Winner of **Music Cup** of the Inter IIT Cultural meet **2019** (at IIT Bombay) and **2023** (at IIT Kharagpur).

SYSTEMS DEVELOPED

• **MESSAGE CHECK** is a fact-checking dashboard, and a predictive learning platform to identify existing fact-checks from www.vishvasnews.com that match dis/misinformation claims going viral. It also enables fact-checkers to predict misinformation around events and identify seasonal or event-based trends that cause a surge in misinformation. Given a multilingual query, it was processed using BM25+ retriever, a supervised Fasttext classifier and a small BERTScore model. It was then merged using Reciprocal Rank Fusion method to efficiently and effectively match debunked claims from a database.

SELECTED PROJECTS

Optimizing Energy Efficiency of LLMs 2024-2025
IIT Kharagpur

We first benchmarked the energy usage of different LLMs for various NLP tasks under different scenarios, and the effect of different optimizations methodologies [e.g. I/O compression, model compression, speculative decoding] in reducing energy consumption. We then showed that LLMs generate very long answers for factual queries, and formally categorize the information into different classes [e.g. minimal answer, additional information, reasoning, redundant information]. We highlight the trade-offs of such long answers that improve the user experience and utility but come at the expense of much higher energy consumption (which adds up over time). We also explored some simple strategies to control the length and content composition of generated outputs, which can be used depending on the specific use case/user preferences.

Characterizing User Opinions towards Vaccines on Twitter (PhD Thesis Work) 2020-2025
IIT Kharagpur

We used automated NLP methods to analyse the opinions of various Twitter user-groups towards vaccines systematically. Beyond high-level Anti- and Pro-vax categorization, we tried to understand specific reasons why people are hesitant to take vaccines and what causes them to change their opinions. We developed the CAVES dataset and supervised Transformer models to identify specific concerns towards vaccines effectively. Through a longitudinal study (5+ years) of tweets, we found that these concerns have become much varied since COVID-19 pandemic, and generic counter-arguments are not enough anymore. We also found cases where new concerns about COVID-vaccines have been transferred to traditional non-COVID vaccines, along with erosion of trust in the healthcare systems. We also explored using LLMs to provide personalised arguments to counter anti-vaccine content on social media to resolve misconceptions.

Summarizing Legal Case Documents (MTech Project and beyond) 2019-2022
IIT Kharagpur

Compared the performance of various summarization algorithms [generic and domain-specific; abstractive and extractive; classical ML vs Transformers based methods] on our curated set of UK and Indian Supreme courts' Legal Judgement Documents. We also created an unsupervised Linear Programming based method to systematically incorporate guidelines from legal experts into to create summaries with appropriate proportions of different rhetorical roles [e.g. fact, statutes, precedents, final judgement].
